STRATEGIC PRODUCT & ARCHITECTURAL AUDIT

TouchGift Platform Review & Architecture

Consolidating the 3 Layers: Consumer Platform, Corporate Landing, and B2B Dashboard

PREPARED FOR	ENGINEERING AUDIT	TARGET ENTITY	DATE & STATUS
Kagz & Leadership	**21 & Antigravity**	**touchgiftshop.co.ke**	**26 Oct 2026 · Ready**

1. Executive Summary

Kagz's unified product document correctly highlights TouchGift's primary competitive moat: **curated luxury hampers, same-day Nairobi logistics, bespoke packaging, and a dual B2C/B2B footprint**. However, live inspection of the production platform (`touchgiftshop.co.ke` / `touch-gift-shop.vercel.app`) reveals that the current product suffers from operational and architectural disconnects:

> **Key Finding:** High-intent traffic is leaking across critical channels (placeholder WhatsApp contact number `0700000000`, corporate navbar dropdown trap, and light mode visual contrast failures). Furthermore, the corporate dashboard is fragmented into 9 separate empty routes rather than a centralized, actionable control room.

This document outlines the evaluation of the **Three Product Layers** and establishes the exact technical blueprint to convert TouchGift into Kenya's default gifting infrastructure.

2. Layer 1: Main Platform (Consumer Storefront)

The consumer platform excels at visual discovery and emotional gifting, but requires immediate trust and checkout fixes.

✅ Current Strengths

- **Interactive Mood Engine:** Real-time filtering across Romantic, Corporate, Apology, and Celebration.
- **Curated Catalog Breadth:** 700+ luxury SKUs spanning bespoke hampers, perfumes, flowers, and self-care.
- **Gift Lab / Build a Box:** Custom hamper building with box selection, ribbon styling, and add-on items.
- **AI Gift Finder:** 30-second quiz matching recipient personality to appropriate gift tiers.

⚠️ Conversion Leaks

- **Fake WhatsApp Number:** Header links to `0700000000`, dropping high-intent buyers.
- **Counter Hydration Bug:** Social proof flashes `0.8/5 RATING` before client JS executes.
- **Hidden Delivery Fees:** Delivery charges appear only in late checkout, increasing abandonment.
- **Pool a Gift Safety:** Lacks transparent ledger, automated refunds, and surplus rules.

ISSUE DETECTED	LIVE LOCATION	SEVERITY	RECOMMENDED SOLUTION
Placeholder WhatsApp	Desktop Header & Contact Chip	P0 Block	Centralize support line to verified business number (+254 142 677 898).
Social Proof Hydration	Homepage Stats Strip	P0 Trust	Pre-render default SSR values of 4.9/5 and 5,000+ in server HTML.
Hidden Delivery Fees	Product Detail & Mini-Cart	P1 UX	Add an area fee estimator pill on product cards (*e.g., KSh 300 Westlands*).
Light Mode Contrast	Global Theme (228 violations)	P1 A11y	Add high-contrast Tailwind variants for gold text and pale subtitles in light mode.
Unpausable Carousels	Homepage Product Rails	P1 WCAG	Implement hover-pause and visible pause/play toggle on auto-scrolling rails.

3. Layer 2: Corporate Platform (/corporate)

The corporate landing page must act as an efficient B2B sales funnel. Corporate buyers (HR leads, procurement officers, executive assistants) need transparent volume pricing, fast compliance verification, and instant quotations.

> **The Corporate Navbar Trap:** Currently, clicking "Corporate" in the top navigation bar does not navigate to `/corporate`. Instead, a React state toggle drops down a 10-link mega-menu. This creates decision paralysis. Clicking "Corporate" must always navigate directly to the landing page in the same tab.

Recommended Corporate Funnel Structure

STEP 1
Clear B2B Tiers
Showcase Executive (KSh 12.5k), Celebration (KSh 6.5k), and Onboarding (KSh 3.5k) tiers with explicit MOQs.

STEP 2
Quote-to-Cash
Interactive volume slider (10–500 boxes) with 1-click automated PDF Proforma quote generation.

STEP 3
Procurement Hub
1-click download of TouchGift's Vendor Pack (KRA PIN, Tax Compliance, SLA, Company Profile).

STEP 4
Direct Onboarding
One-tap M-Pesa deposit / Bank Wire reservation or instant concierge WhatsApp handoff.

4. Layer 3: Corporate Dashboard (/corporate/dashboard)

Code analysis of the production dashboard bundle (`page-31eec03750e6d497.js`) shows 9 fragmented sub-pages (`/build`, `/calendar`, `/clients`, `/milestones`, `/marketplace`, `/catalog`, `/showroom`, `/whitelabel`, `/pools`) filled with placeholder zero metrics.

The Strategic Correction: Consolidate the 9 fragmented routes into a unified **4-Widget Control Room** designed around daily actions:

🚨 1. Action Center (Top Blockers)
Displays immediate blockers requiring human intervention: missing recipient addresses, unapproved bulk orders, or invalid Kenyan phone numbers.

📦 2. Bulk Dispatch & Tracking
CSV upload engine with automatic +254 phone normalizer and WhatsApp Magic Links (recipients pick their own address; HR never handles private home data).

🗓️ 3. Milestone Engine (Set & Forget)
90-day team calendar tracking birthdays, work anniversaries, and promotions with automated 7-day advance WhatsApp approval reminders.

🧾 4. Finance & eTIMS Invoicing Hub
Integrated KRA eTIMS invoice generation, PO/LPO reference mapping, and corporate payment methods (M-Pesa Paybill STK push and Bank Wire).

5. Shared Core: Build Once, Expose Twice

To ensure high performance and maintainability, four core features must share the exact same underlying architecture across both B2C and B2B:

CORE CAPABILITY	MAIN PLATFORM (B2C FACE)	CORPORATE PLATFORM (B2B FACE)
Address Intake	Customer enters delivery location & landmark at checkout.	Recipient confirms landmark via WhatsApp Magic Link.
Recipient-Led Choice	Sender pays gift voucher; recipient chooses size/flavor.	Company sets budget; employee picks from 3 curated gifts.
Delivery Proof	Photo proof sent to sender's WhatsApp on delivery.	Photo proof & timestamp logged in financial audit report.
Occasion Engine	Personal birthday and anniversary reminders.	HRIS/CSV automated employee milestone triggers.

6. Phased Execution Roadmap

Phase 0: Immediate Trust & Conversion Fixes — Target: 1 – 3 Days

Fix header WhatsApp link to real number, make Corporate navbar button route directly to `/corporate`, fix `0.8/5` hydration bug, tune light mode CSS contrast, and add active 6 PM cutoff countdown pill.

Phase 1: Quote-to-Cash & Safe Pools — Target: Weeks 1 – 2

Deploy interactive B2B tier calculator on `/corporate` with 1-click PDF quote generator, upload downloadable Procurement Vendor Pack, and introduce money-safe ledger & auto-refunds to Pool a Gift.

Phase 2: Corporate Cockpit & Milestone Engine — Target: Weeks 3 – 4

Consolidate the 9 dashboard sub-routes into the 4-widget Cockpit, connect WhatsApp bot for recipient address intake, and integrate KRA eTIMS compliant tax invoicing.
